

Equipment Demobilization

Reserve Component equipment will redeploy through designated Demobilization Sites IAW Fifth Army Demob Plan. The equipment may not redeploy through the same installation that the unit personnel will redeploy through. (See [Demob Sites](#))

Reserve Component unit Reconstitution is conducted in 3 phases:

- Phase I - At the Equipment Demobilization Site (EDS). The installation will make necessary repairs to return equipment to Fully Mission Capable (FMC) and identify and order all class IX parts required to return equipment to TM-10/20. The goal is to return equipment to home station within 90 days from the Required Delivery Date (RDD) specified on the Unit Line Number (ULN) of the redeployment TPFDD.
- Phase II – At unit's Home Station. The unit has an additional 90 days to conduct 100% inventories, reconcile property books and requisition Class II and VII shortages at home station using deployment DODAACs.
- Phase III – Reconstitution. The unit has 360 days from the RDD of unit equipment at DMS to make necessary repairs to return equipment to TM-10/20.

The JFHQ/RRC will provide teams from the unit or a representative team from the JFHQ/RRC to conduct an inventory of equipment and joint TI.

Containers will be shipped to the EDS. The Installation Transportation Office will arrange for the most cost effective and efficient transportation to the final RC equipment destination.

In the event that MTOE equipment is packed inside a returning container, it will be necessary to open the container at the EDS and remove the required equipment. Opening a container at the EDS requires personnel from both the owning unit (or designated representatives) and the EDS to conduct a 100% inventory of the entire contents. Those units choosing not to comply with these requirements and ship their containers back to HS will be held

responsible for costs required to bring the equipment to FMC or the shipping costs to return the equipment back to the EDS.

CONTAINERS.

- If the unit purchased a 20 ft. ISO container and submitted for incremental cost reimbursement and received reimbursement the container will must be returned to the nearest installation upon redeployment.
- Units that received containers that were purchased by their mobilization station for their deployment will have to make arrangements to return the containers to the mobilization station ITO upon their redeployment.
- Units that leased containers will ensure that the conditions of their contract are fulfilled and containers are returned as per leasing agreement. Please coordinate all required assistance through the ITO office.

463L Pallets. If pallets (463L), top and side nets were provided to deploying units they must be returned to the installation ITO or A/DACG from which they were received.

DODAAC. DODAACs used for deployment should only be changed by two activities: 1) CFLCC and 2) The Reserve Component (RC) Logistics Cell at Ft. Gillem. Before departure from the AOR, CLFCC is responsible for changing the Type Action Code (TAC) 1 and 2 addresses of the deployment DODAAC to reflect the home station address. The TAC 3/billing address should still reflect CLFCC's TAC 3/billing address. Once CFLCC has cleared the DODAAC (no outstanding supply or financial transactions), the RC Logistics Cell will change the TAC 3 to the financial activity supporting the RC Logistics Cell at Ft. Gillem.

OCIE.

- Soldiers redeploying from OIF and OEF to home station are authorized to retain one desert camouflaged coat, one pair of desert trousers, and one desert helmet cover as transferable OCIE. Soldiers who mobilized but did not deploy are also authorized to retain one set as transferable. These items will be added to the individual soldier's clothing record and sustained. The other desert DCU related items (desert boots,

hat and cap) are currently transferable items and will remain in the soldier's possession and on their clothing record.

- All remaining serviceable DCU trousers, coats and field jackets will be returned to the issuing central issue facility (CIF).

Body Armor.

- Interceptor Body Armor (IBA), which includes the Outer Tactical Vest (OTV) and Small Arms Protective Inserts (SAPI), and Personnel Armor Systems Ground Troops (PASGT) Body Armor will be turned into CLFCC prior to redeployment with the exception of the following sizes: XS, XL, 2X and 3X.
- Property Accountability Officers will ensure that all turn-in documentation for body armor is hand carried back to the mobilization station or home station to clear their hand receipt.
- Soldiers who redeploy with IBA and PASGT will turn-in equipment at the Mob Station or installation CIF.

Individual Protective Equipment (IPE).

- All redeploying units will turn in their unopened IPE items prior to departing CFLCC. Units redeploying from all locations other than Kuwait and Iraq will return their IPE to the DMS.
- If units do not turn-in IPE in theater they will turn in all unopened IPE to the demobilization station, except special order size JSLIST which will be retained by the individual.

CANVAS and TENTS. Operational needs and/or Customs provisions may restrict shipping of some textile items requiring units to leave (turn-in or transfer) some canvas, tents or other textile items in AOR. RC/NGB units will order shortages at DMS through the RC Logistics Team using their deployment DODAAC.

CLASS V (Ammunition and Explosives). All Class V will be turned-in to the designated Ammunition Supply Point (ASP) in the AOR. Property Accountable Officers will ensure that all turn-in documentation is hand-carried with them and is not shipped back by separate conveyance. In no instance will commanders allow soldiers to redeploy with any Class V items (including Force Protection or TAT).

CLASS IX (Repair Parts). RC units retain their PLL, use it during the demobilization phase, but will not reconstitute their PLL.

- Prior to departing Theater.
 - CLFC will convert redeploying units to “remote (dedicated)” customers 60 days prior to redeployment to ensure that unit document numbers are perpetuated to the wholesale level.
 - 15 days prior to unit’s departure managers of the SARSS 2A boxes will adjust the unit requisition status to “fill or kill”. Parts on back order but not shipped will be canceled before leaving the AOR which will clear the deployed DODAAC as much as possible.
 - Prior to departure CLFCC AOR and unit will reconcile all outstanding recoverable items with the supporting Class IX Accountable Officer.
 - As prescribed by CFLCC authority, redeploying activities are directed to leave portions of PLL, Shop Stock and ASL in theater to support Stay Behind Equipment (SBE).
- Upon return to CONUS.
 - Once the joint TI is performed at the DMS, the request for TM -10/-20 parts will be placed on order through ULLS-G or a manual system managed by a RC Logistics Team at the DMS. These parts will be requested using the unit’s deployment DODAAC. This process allows these parts to be shipped to the units’ HS addresses while being billed to a central account. The RC Logistics Cell at Ft. Gillem will execute a pseudo-receipt (D6S) on all deployment DODAAC CL IX requisitions, 30 days after confirmed “ship status”.
 - Units that returned to HS prior to completion of the joint TI will conduct TI at HS and coordinate with their DMS prior to requisitioning TM -10/-20 parts.
 - Parts required to bring equipment to FMC standard will be requisitioned by the DMS maintenance activity using their DODAAC.

Units redeploying from the AOR are required to deploy with all unit **MTOE STAMIS** shipped as unit equipment TAT. Units will backup all databases and hand-carry the storage device (disk or tape).
